DETAILED ACTION

Claim Objections

Claim 6 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim may not depend on another multiple dependent claim, such as claims 4 and 5. See MPEP § 608.01(n). Accordingly, the claim 6 not been further treated on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 7 provides for the use of the product of claim 1, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 7 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by
Kishimoto et al. (JP 09-208437, machine translation).**

Kishimoto discloses metal oxide resin complex powder used in cosmetic compositions, wherein the resins may be unsaturated monomers such as poly(meth)acrylic acid ester, acryl-styrene copolymer, etc. See abstract; instant claims 1-3 and 7. Example 1 illustrates zinc oxide and methyl methacrylate resin monomer complex and cerium oxide and methyl methacrylate resin monomer. The reference teaches the metal oxide resin powder has UV shielding function and has transparency. See [0018].

Claims 1, 4 -6 are product-by-process claims which are directed to the process by which the metal oxide complex powder is obtained by introducing onto the surface of the metal oxide a polymerization initiator. It is well settled in patent law that "even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." See In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). In this case, since the prior art metal oxide resin complex powder of a methyl methacrylate (polymerizable and unsaturated group containing monomer) remain transparent at use, the end products of the prior art and the present claims are deemed to be the same.

Conclusion

No claim is allowed.
